

U.S. Air Force Base Protects Critical Floor Areas With CHEMCLAD and FPS

The ENECON Mid Atlantic Engineering Team, headed by Matt Goldberg, has been very busy during the past three years in repairing and protecting **thousands of square feet** of floor areas throughout this massive air base -- including numerous aircraft hangars.

Conventional coating systems have provided only limited performance in the past and the air base wanted a longer term solution to these tough floor protection applications. ENECON's high performance polymer composites provided the cost effective and commercially proven alternative to conventional paint systems.

The ENECON Field Application Services Team, headed by Carl Durham, ENECON's National Projects Manager, have now completed well over half a million dollars of CHEMCLAD and FPS applications to the complete satisfaction of the U.S. Air Force.
